OVERVIEW

Groundwater monitoring requirements in accordance with the Federal Register, Environmental Protection Agency, 40 CFR Parts 257.94, Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals from Electric Utilities; Final Rule dated April 17, 2015 (CCR Rule) and subsequent amendments, have been completed for the ash pond monitoring wells located at the Midwest Generation, LLC (Midwest Generation) Joliet #29 Generating Station. The wells sampled were selected to meet the monitoring requirements of the CCR Rule for Ash Pond 2. The monitoring well network around this pond consists of four monitoring wells (MW-3, MW-4, MW-5 and MW-10 [upgradient]) as shown on Figure 1.

This overview of the 2021 groundwater monitoring period is provided in accordance with revised requirements under Section 257.90(e)(6). Each required item is discussed separately below.

- Section 257.90(e)(6)(i) – At the start of the current monitoring period, the subject CCR unit was operating under the detection monitoring program outlined in Section 257.94.
- Section 257.90(e)(6)(ii) – At the end of the current monitoring period, the subject CCR unit continues to operate under the detection monitoring program outlined in Section 257.94.
- Section 257.90(e)(6)(iii) – There were confirmed statistically significant increases (SSIs) above established background for the Appendix III detection monitoring constituents of total dissolved solids (TDS), sulfate, chloride and calcium at varying well locations including upgradient well MW-10. A subsequent Alternate Source Demonstration (ASD) concluded that the noted SSIs were not associated with a potential release from Pond 2 but rather an alternate transient source of impacts, potentially from upgradient and offsite. It is recommended that the site remain in detection monitoring at this time.
- Section 257.90(e)(6)(iv) – The subject site is not in assessment monitoring.
- Section 257.90(e)(6)(v) – The subject unit is not under corrective action.
- Section 257.90(e)(6)(vi) – The subject unit is not under corrective action.

1.0 INTRODUCTION

The Detection Monitoring requirements in accordance with the Federal Register, Environmental Protection Agency, 40 CFR Parts 257.94, Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals from Electric Utilities; Final Rule dated April 17, 2015 (CCR Rule) and subsequent amendments have been completed for the ash pond monitoring wells located at the Midwest Generation, LLC (Midwest Generation) Joliet #29 Generating Station. The wells sampled were selected to meet the monitoring requirements of the CCR Rule for Ash Pond 2 which no longer contains any ash, however, the warning layer and liner are still in place. The monitoring well network around this pond consists of four monitoring wells (MW-3, MW-4, MW-5 and MW-10 [upgradient]) as shown on Figure 1.

This annual report covers the work performed relative to CCR groundwater monitoring for the 2021 calendar year. It does not duplicate information or activities reported in previous years. It is prepared in accordance with Section 257.90(e)(1-6) and summarizes the sampling procedures used, provides an evaluation of groundwater flow conditions, summarizes the analytical data generated and provides a discussion of the statistical evaluations completed as a basis for determining the appropriate next phase of compliance activities.

2.0 FIELD PROCEDURES AND GROUNDWATER FLOW EVALUATION

2.1 Field Procedures

As previously noted, the CCR groundwater monitoring network for Ash Pond 2 consists of four wells (MW-3, MW-4, MW-5 and MW-10) as shown on Figure 1. As part of sampling procedures, the integrity of all monitoring wells was inspected and water levels were obtained using an electronic water level meter (see summary of water level discussion below). During all sampling events, the wells were found in good condition with locked protector casings, and the concrete surface seals were intact.

All groundwater samples were collected using the low-flow sampling technique from dedicated pumps. The samples were not filtered prior to analysis to provide for total metals concentrations as opposed to dissolved metals concentrations. One duplicate sample was collected from a randomly selected monitoring well per sampling event for quality assurance purposes.

2.2 Groundwater Flow Evaluation

Water level data measurements were obtained from each well during each round of groundwater monitoring. A complete round of water levels was collected prior to initiating sampling, and the water level data are summarized in Table 1. The water levels were used to generate a groundwater flow map for each sampling event. These maps are provided as Figures 2 and 3. A review of the maps indicates a consistent generally southerly groundwater flow direction and a shallow horizontal hydraulic gradient. In accordance with general groundwater sampling requirements under Section 257.93(c), Table 2 provides a summary of the flow direction and an estimated rate of groundwater flow for each sampling event. The flow rate was calculated using the following equation:

$$V_s = \frac{Kdh}{n_e dl}, \text{ where}$$

V_s is seepage velocity (distance/time)

K is hydraulic conductivity (distance/time)

dh/dl is hydraulic gradient (unitless)

n_e is effective porosity (unitless)

Through 2020, the average hydraulic conductivity of 3.896×10^{-3} ft/sec used in Table 2 was obtained from the Hydrogeologic Assessment Report dated February 2011 and prepared by Patrick Engineering. As part of Illinois EPA State CCR Rule requirements, some groundwater modeling was being completed for Ash Pond 2. The Patrick Engineering slug test data were re-evaluated as part of the modeling exercise and a modified hydraulic

geometric mean of 1.968×10^{-3} ft/sec was estimated and subsequently used in Table 2 for 2021 estimates. The estimated effective porosity of the aquifer materials (0.35) was obtained from literature (Applied Hydrogeology, Fetter, 1980).

3.0 ANALYTICAL DATA AND STATUS OF EVALUATIONS

3.1 Sampling Summary

The groundwater sampling summary from 2021 is provided in Table 3, in accordance with 257.90 (e)(3). Analytical data packages are included in Appendix A.

3.2 Data Summary

The analytical data from the detection monitoring groundwater samples for Appendix III parameters are provided in Table 4. Semi-annual groundwater sampling was completed for Appendix III in 2021 in accordance with detection monitoring requirements under Section 257.94. The tables include the sample dates and whether the specific well is considered upgradient or downgradient relative to groundwater flow and the regulated unit. For each monitoring event (May and November 2021) a duplicate sample was collected. The duplicates were from monitoring wells MW-10 and MW-5, respectively. All duplicate values were within an acceptable range. Confirmatory resampling in accordance with CCR Compliance Statistical Approach for Groundwater Data Evaluation for Joliet #29 Station dated October 10, 2017 were limited to any potential statistically significant increases (SSI) for specific parameters at specific wells.

A statistical evaluation of the semi-annual detection monitoring sampling which occurred in the second quarter 2021 (Appendix III parameters) was completed. The initial sampling data indicated potential statistically significant increases (SSI) for total dissolved solids (TDS) and sulfate above the calculated Prediction Limit (PL) at wells MW-3, MW-4, MW-5 and MW-10, chloride above its respective PL at MW-5 and MW-10, and calcium above its respective PL at MW-10. It is noted that well MW-10 is the upgradient monitoring point. Confirmatory sampling was limited to these potential statistically significant increases to minimize potential false positives, as allotted by CCR Compliance Statistical Approach for Groundwater Data Evaluation for Joliet #29 Station dated October 10, 2017. All confirmatory resampling results continued to indicate a potential SSI for each noted constituent. It was recommended to proceed with completing an Alternate Source Demonstration (ASD) in accordance with provisions under 40 CFR 257.94(e)(2).

An ASD was completed on October 11, 2021. The results of the ASD concluded that the noted SSIs for TDS, sulfate, chloride and calcium were not associated with a potential release from Ash Pond 2 but rather an alternate transient source of impacts, potentially from upgradient and offsite.

Fourth quarter detection monitoring indicated ongoing TDS and sulfate detections above the established PLs, including in upgradient monitoring well MW-10, however

concentrations of chloride and calcium were again below the PLs for those constituents. These data are still consistent with conclusions forwarded in the above referenced ASD.

3.3. Current Status

The ASD completed on October 11, 2021 concluded that the noted SSIs for TDS, sulfate, chloride and calcium at various well locations were not the result of leakage of leachate from the regulated unit but rather an alternate transient source of impacts, potentially from upgradient and offsite. Therefore, it is recommended that the station remain in routine detection monitoring.

4.0 OTHER REQUIRED SUBMITTALS

4.1 Alternate Source Demonstration

An ASD was completed October 11, 2021 for TDS, sulfate, chloride and calcium at varying well locations (see Section 3.2) in accordance with Section 257.94(e)(2) of the Federal CCR Rule. Based on the data evaluation and discussions provided in the ASD report, it was concluded that the noted SSIs for TDS, sulfate, chloride and calcium are not associated with a potential release from Pond 2 but rather an alternate transient source of impacts, potentially from upgradient and offsite. This conclusion was based on the following:

- There have been no CCR materials or associated liquids contained within Pond 2 since 2019 at which time the liner was decontaminated.
- TDS, sulfate and chloride concentrations were noted above the PL in the upgradient well MW-10 as well as in the downgradient wells.
- Subsequent follow-up sampling showed concentrations of the above noted parameters to have decreased in all the subject wells with some reverting back to concentrations below the PL and within historically detected ranges at those wells.
- Calcium was only detected above the PL at the upgradient well location MW-10 with the follow-up sampling at that well indicated a calcium concentration below the PL and within the historically detected range at this location.

Based on this conclusion, it was recommended to continue with detection monitoring at this time. The full ASD report is provided in Appendix B.

5.0 SUMMARY/CONCLUSIONS AND RECOMMENDATIONS

The detection monitoring requirements in accordance with the Federal CCR Rule have successfully been met. Groundwater monitoring wells that had analytical results showing parameters concentrations above established PLs were resampled to minimize potential for a false positive. An ASD was completed for TDS, sulfate, chloride and calcium at varying well locations. It was concluded that the noted SSIs for TDS, sulfate, chloride and calcium were not associated with a potential release from Pond 2 but rather an alternate transient source of impacts, potentially from upgradient and offsite. At this time, it is recommended that the station stay in routine detection monitoring.

Notes: All units are in mg/l except pH is in standard units.
 * - Intrawell Prediction Limit. All others are interwell comparisons with MW-10 as background.
Bold - Potential statistically significant increase.
 F1 - MS and/or MSD Recovery outside of limits.
 Pred. Limit - Prediction Limit
Italics Date - First round of Detection Monitoring and resample after statistical background establishment.
 NA - Not analyzed. No confirmation resample required.
 R - Resample

Comments

No additional comments.

Receipt

The samples were received on 5/18/2021 1:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 3 coolers at receipt time were 5.5° C, 5.9° C and 6.0° C.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

General Chemistry

Qualifier	Qualifier Description
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	5.5,6.0,5.9
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Comments

No additional comments.

Receipt

The samples were received on 11/17/2021 11:53 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 2 coolers at receipt time were 5.1° C and 5.3° C.

Metals

Method 6020A: The initial low level continuing calibration verification (ICVL) associated with batch 500-633145 recovered above the upper control limit for Beryllium. The samples associated with this ICVL were non-detects for the affected analyte; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 500-208539-1

Qualifiers

Metals

Qualifier	Qualifier Description
^1+	Initial Calibration Verification (ICV) is outside acceptance limits, high biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	5.1,5.3,5.5
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Re: Alternate Source Demonstration
Joliet #29 Generating Station – Pond 2

Dear Ms. Shealey:

The routine Detection Monitoring requirements in accordance with the Federal Register, Environmental Protection Agency, 40 CFR Parts 257.94, Hazardous and Solid Waste Management System; Disposal of Coal Combustion Residuals from Electric Utilities; Final Rule dated April 17, 2015 (CCR Rule) was completed in the second quarter 2021 for the Pond 2 monitoring wells located at the Midwest Generation, LLC (Midwest Generation) Joliet #29 Generating Station. The CCR monitoring well network around Pond 2 consists of four monitoring wells: MW-10 [upgradient] and downgradient wells MW-3 through MW-5. The monitoring well network is shown on Figure 1. A statistical evaluation of the semi-annual detection monitoring sampling which occurred in the second quarter 2021 (Appendix III parameters) was completed and submitted to Midwest Generation. The following conclusions/recommendations were provided:

“...The initial sampling data indicated potential statistically significant increases (SSI) for total dissolved solids (TDS) and sulfate above the calculated Prediction Limit (PL) at wells MW-3, MW-4, MW-5 and MW-10, chloride above its respective PL at MW-5 and MW-10, and calcium above its respective PL at MW-10. It is noted that MW-10 is the upgradient monitoring point.

Confirmatory sampling was limited to these potential statistically significant increases to minimize potential false positives, as allotted by CCR Compliance Statistical Approach for Groundwater Data Evaluation for Joliet #29 Station dated October 10, 2017. All confirmatory resampling results continued to indicate a

potential SSI for each noted constituent. It is recommended to proceed with completing an Alternate Source Demonstration (ASD) in accordance with provisions under 40 CFR 257.94(e)(2). Depending on the results of the ASD, a determination will be made whether to continue with detection monitoring under Part 257.94 or to initiate assessment monitoring under Part 257.95.”

This report summarizes the results of the Alternate Source Demonstration completed for the Joliet #29 Generating Station Pond 2 in accordance with 40 CFR 257.94(e)(2).

DOCUMENTATION OF EXISTING CONDITIONS

The Joliet #29 Generating Station currently operates as a natural gas-fired generating station. The station switched from burning coal to natural gas in 2016. As part of the previous coal-fired operations, the station operated two ash ponds (Ponds 1 and 2) and a settling pond (Pond 3). Pond 1 was taken out of service in 2015 with all ash being removed, the liner decontaminated and the use of the pond repurposed for low volume wastewater. Pond 1 is not a coal combustion residual (CCR) surface impoundment. The settling pond (Pond 3) was determined to not have sufficient ash and is not a CCR surface impoundment. Pond 2 continued to be used for CCR management/storage until 2019 at which point the ash was removed. The warning and cushion layers remain in-place and all other portions of the liner have been decontaminated. Therefore, Pond 2 has not contained any CCR materials or CCR related fluids since 2019.

ALTERNATE SOURCE EVALUATION OF THE SSI PARAMETERS

As stated above, the first semi-annual detection monitoring sampling which occurred in the second quarter 2021 confirmed potential SSIs for TDS, sulfate, chloride and calcium at varying well locations. Another round of groundwater sampling for these parameters at the subject well locations was completed during the third quarter 2021, the results of which are used to assist in this evaluation. Each is discussed separately below. The applicable data are summarized in Table 1. The third quarter sampling data package is included as Attachment 1.

Total Dissolved Solids

TDS detections were confirmed above the PL during the second quarter sampling at upgradient well MW-10 as well as in downgradient wells MW-3 through MW-5. The follow-up sampling completed during the third quarter 2021 still showed concentrations above the PL at well locations MW-10 (upgradient) and downgradient wells MW-4 and MW-5, however, all concentrations had decreased compared to the previous round. The third quarter sampling result at downgradient well location MW-3 was below the PL and within concentrations historically detected at this location. This is illustrated in the time versus concentration curves for TDS provided in Attachment 2.

Consider these factors: that there have been no CCR materials or associated liquids contained within this pond since 2019; that the upgradient well also displayed a similar

magnitude concentration above the PL; and that subsequent sampling has documented decreasing concentrations at all locations. These factors indicate that the noted SSIs are not related to a potential release from Pond 2 but rather indicate an alternate transient upgradient source of TDS concentrations.

Sulfate

Sulfate detections were confirmed above the PL during the second quarter sampling at upgradient well MW-10 as well as in downgradient wells MW-3 through MW-5. The follow-up sampling completed during the third quarter 2021 still showed concentrations above the PL at all four well locations, however, all concentrations had decreased from the previous round. This is illustrated in the time versus concentration curves for sulfate provided in Attachment 2.

Consider these factors: that there have been no CCR materials or associated liquids contained within this pond since 2019; that the upgradient well also displayed a similar concentration above the PL; and that subsequent sampling has documented decreasing concentrations at all locations. These factors indicate that the noted SSIs are not related to a potential release from Pond 2 but rather indicate an alternate transient upgradient source of sulfate.

Chloride

Chloride detections were confirmed above the PL during the second quarter sampling at upgradient well MW-10 as well as in downgradient well MW-5. The follow-up sampling at those wells completed during the third quarter 2021 still showed concentrations above the PL at well location MW-10 (upgradient), however, the concentration had decreased from the previous round. The third quarter sampling at downgradient well location MW-5 was below the PL and within concentrations historically detected at this location. This is illustrated in the time versus concentration curves for chloride provided in Attachment 2.

Consider these factors: that there have been no CCR materials or associated liquids contained within this pond since 2019; that the upgradient well also displayed a similar concentration above the PL; and that subsequent sampling has documented decreasing concentrations at these locations. These factors indicate that the noted SSIs are not related to a potential release from Pond 2 but rather indicate an alternate transient upgradient source of chloride.

Calcium

Calcium was confirmed above the PL during the second quarter sampling only at upgradient well MW-10. There were no calcium detections above the PL in the downgradient wells. The follow-up sampling completed at that well during the third quarter 2021 showed the MW-10 calcium concentration to be below the PL and within concentrations historically detected at this location. This is illustrated in the time versus concentration curves for calcium provided in Attachment 2.

Consider these factors: that there have been no CCR materials or associated liquids contained within this pond since 2019; that the upgradient well was the only well that displayed a concentration above the PL; and that subsequent sampling of this well has documented a calcium concentration below the PL and within concentrations historically detected at this location. These factors indicate that the SSI was not related to a potential release from Pond 2 but rather indicates an alternate transient upgradient source of calcium.

CONCLUSIONS/RECOMMENDATIONS

Based on the data evaluation and discussions provided above, it is concluded that the noted SSIs for TDS, sulfate, chloride and calcium are not associated with a potential release from Pond 2 but rather an alternate transient source of impacts, potentially from upgradient and offsite. This conclusion is based on the following:

- There have been no CCR materials or associated liquids contained within Pond 2 since 2019 at which time the liner was decontaminated.
- TDS, sulfate and chloride concentrations were noted above the PL in the upgradient well MW-10 as well as in the downgradient wells.
- Subsequent follow-up sampling during the third quarter 2021 showed concentrations of the above noted parameters to have decreased in all the subject wells with some reverting back to concentrations below the PL and within historically detected ranges at those wells.
- Calcium was only detected above the PL at the upgradient well location MW-10 with the follow-up sampling at that well in the third quarter 2021 indicated a calcium concentration below the PL and within the historically detected range at this location.

Based on this conclusion, it is recommended to continue with detection monitoring at this time.

Sincerely,
KPRG and Associates, Inc.

Comments

No additional comments.

Receipt

The samples were received on 8/27/2021 6:00 PM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were 1.3° C, 2.5° C, 2.6° C and 3.2° C.

Receipt Exceptions

The following sample(s) was submitted for analysis; however, it was not listed on the Chain-of-Custody (COC): "Duplicate" Client did not check analysis off on COC and didn't provide date. Logged as sample #5 and logged date per container label (8/30/21). Analysis logged per container labels (same as all previous samples).

Metals

Method 6020A: The continuing calibration verification (CCV) at line 64, associated with batch 500-617878 recovered above the upper control limit for Antimony. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Job ID: 500-204479-1

Qualifiers

Metals

Qualifier	Qualifier Description
^+	Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CFU	Colony Forming Unit
CNF	Contains No Free Liquid
DER	Duplicate Error Ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL	Detection Limit (DoD/DOE)
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision Level Concentration (Radiochemistry)
EDL	Estimated Detection Limit (Dioxin)
LOD	Limit of Detection (DoD/DOE)
LOQ	Limit of Quantitation (DoD/DOE)
MCL	EPA recommended "Maximum Contaminant Level"
MDA	Minimum Detectable Activity (Radiochemistry)
MDC	Minimum Detectable Concentration (Radiochemistry)
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
MPN	Most Probable Number
MQL	Method Quantitation Limit
NC	Not Calculated
ND	Not Detected at the reporting limit (or MDL or EDL if shown)
NEG	Negative / Absent
POS	Positive / Present
PQL	Practical Quantitation Limit
PRES	Presumptive
QC	Quality Control
RER	Relative Error Ratio (Radiochemistry)
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
TNTC	Too Numerous To Count

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.6,1.3,3.2,2.5
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	False	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Lab Chronicle

Client: Midwest Generation EME LLC
 Project/Site: Joliet #29 CCR

Job ID: 500-204479-1

Client Sample ID: MW-10
Date Collected: 08/30/21 14:30
Date Received: 08/31/21 10:57

Lab Sample ID: 500-204479-4
Matrix: Water

Prep Type	Batch Type	Batch Method	Run	Dilution Factor	Batch Number	Prepared or Analyzed	Analyst	Lab
