Subject: Assessment Monitoring Notification - Powerton Generating Station
Date: Wednesday, August 22, 2018 9:52:00 AM
Attachments: [image001.png](#)

Rick, Ted and Darin,

Pursuant to the requirements of §257.94(b), the first round of Detection Monitoring samples was collected from the CCR monitoring wells associated with the Ash Surge Basin and Bypass Basin units located at Powerton Generating Station (IL0002232). In accordance with §257.93(h), analytical results from the downgradient wells were reviewed and evaluated to identify the potential existence of statistically significant increases (SSIs) over background groundwater concentrations. This evaluation yielded the identification of SSIs for several Appendix III constituents across multiple downgradient well locations. In consideration of the SSIs being valid and representative, Assessment Monitoring Programs for the affected CCR units are being established to comply with the obligations of §257.94(e)(1).

Accordingly, this notification is being made by Midwest Generation, LLC to satisfy the requirements of §257.94(e)(3), including documented placement of this information into each of the facility's operating records [§257.105(h)(5)]. This notification is being further provided to the State to comply with the obligations of §257.106(h)(4), and will also be posted on the publicly accessible website per §257.107(h)(4). This posting will be available on our public website at <http://www.nrg.com/legal/coal-combustion-residuals>.

Should you require additional information or if you would prefer to have these notices provided to other contacts at the Agency, please do not hesitate to contact us.
